PERSONAL SUMMARY

I'm a web developer from London, UK. I have recently graduated with a 2:1 in Digital Media and I enjoy designing and building things that live on the internet. My interest in web development bloomed after writing my first line of code, using HTML, CSS & jQuery to manipulate the DOM to create fun animations and then using PHP to create a database query with MySQL in order to create a login registration system.

Ideation, design, and implementation are all influenced by my background in art and design. I gained a further insight into the design process from completing work experience at Sprinklr, which enabled me to have an understanding of the different elements that all play a part in creating a successful application. I have always enjoyed creating useful products and services that serve not only functional purposes but aesthetic as well, due to this I am fluent in software platforms such as Adobe XD and Figma to aid me in the design process. Functionality is not enough for me; accessibility is always a must.

Forward to the present day, I am a graduate who is constantly building on and expanding their skillset and mainly focusing on building accessible web applications in Javascript, C#,Asp.Net Core and more.

I am eager to learn new technologies that will combine different variations to produce the greatest results for an application.

ACADEMIC QUALIFICATION

2018 – 2022	B.A (Hons) Digital Media University of Salford Course Modules: Digital Media Applications, Design Fundamentals, Digital Innovation & Technology (DIT), Designing User Experiences, Enhanced DIT	2:1

AREAS OF EXPERTISE

ASP.NET CORE (MVC)

C#

Microsoft SQL Server

Azure

Javascript

Bootstrap

HTML

CSS

Unity

Figma

Adobe XD

Adobe AfterEffects

Blender

Photoshop

WORK EXPERIENCE

2018   SPRINKLR - SOFTWARE COMPANY
                 Web Developer & Operation Management

Gained valuable technical experience, developed personal performance in a operations.

Duties:
Meetings with the design team to understand how they build
and implement functional features to create a bespoke CXM platform
for client specifications.
Shadowing seniors writing SaaS code to develop a CXM platform
Working with the operations department to understand how to
provide better customer service through a CXM platform.

2017   L'OCCITANE - GLOBAL MANUFACTURER AND RETAILER
                 Digital Department

Gained valuable technical experience, developed personal performance in a corporate setting, and developed knowledge of the company's core business operations.
